

Path Safety Assessment Tool (PSAT)

User Guide

Welcome to the Path Safety Assessment Tool (PSAT). This tool allows you to evaluate active mobility paths using the CycleRAP model.

1. Getting Started

- **Start a Project:** From the Home page, click "New Project" to import your shapefiles, mapping data, and street-level imagery.
- **Project Settings:** Ensure your project name is correctly set. You can manage multiple projects simultaneously from the Projects listing.

2. Coding Page

- **Auto-coding:** Use the "Auto-code image" button to leverage AI models that automatically identify risk factors from the image.
- **GIS Coding:** Our GIS backend automatically evaluates contextual data such as proximity to MRT exits, bus stops, and road intersections.
- **Manual Review:** You can meticulously review and override the attributes predicted by the AI directly on the panel.

3. Map View & Analysis

- **GIS Layers:** Toggle the map layers to visualize Footpaths, Cycling Paths, and Road Crossings.
- **Risk Bands:** Segments are color-coded based on overall risk logic.
- **Editing:** You can add or delete segment points directly on the Map preview using the cursor tools.
